# Abstract

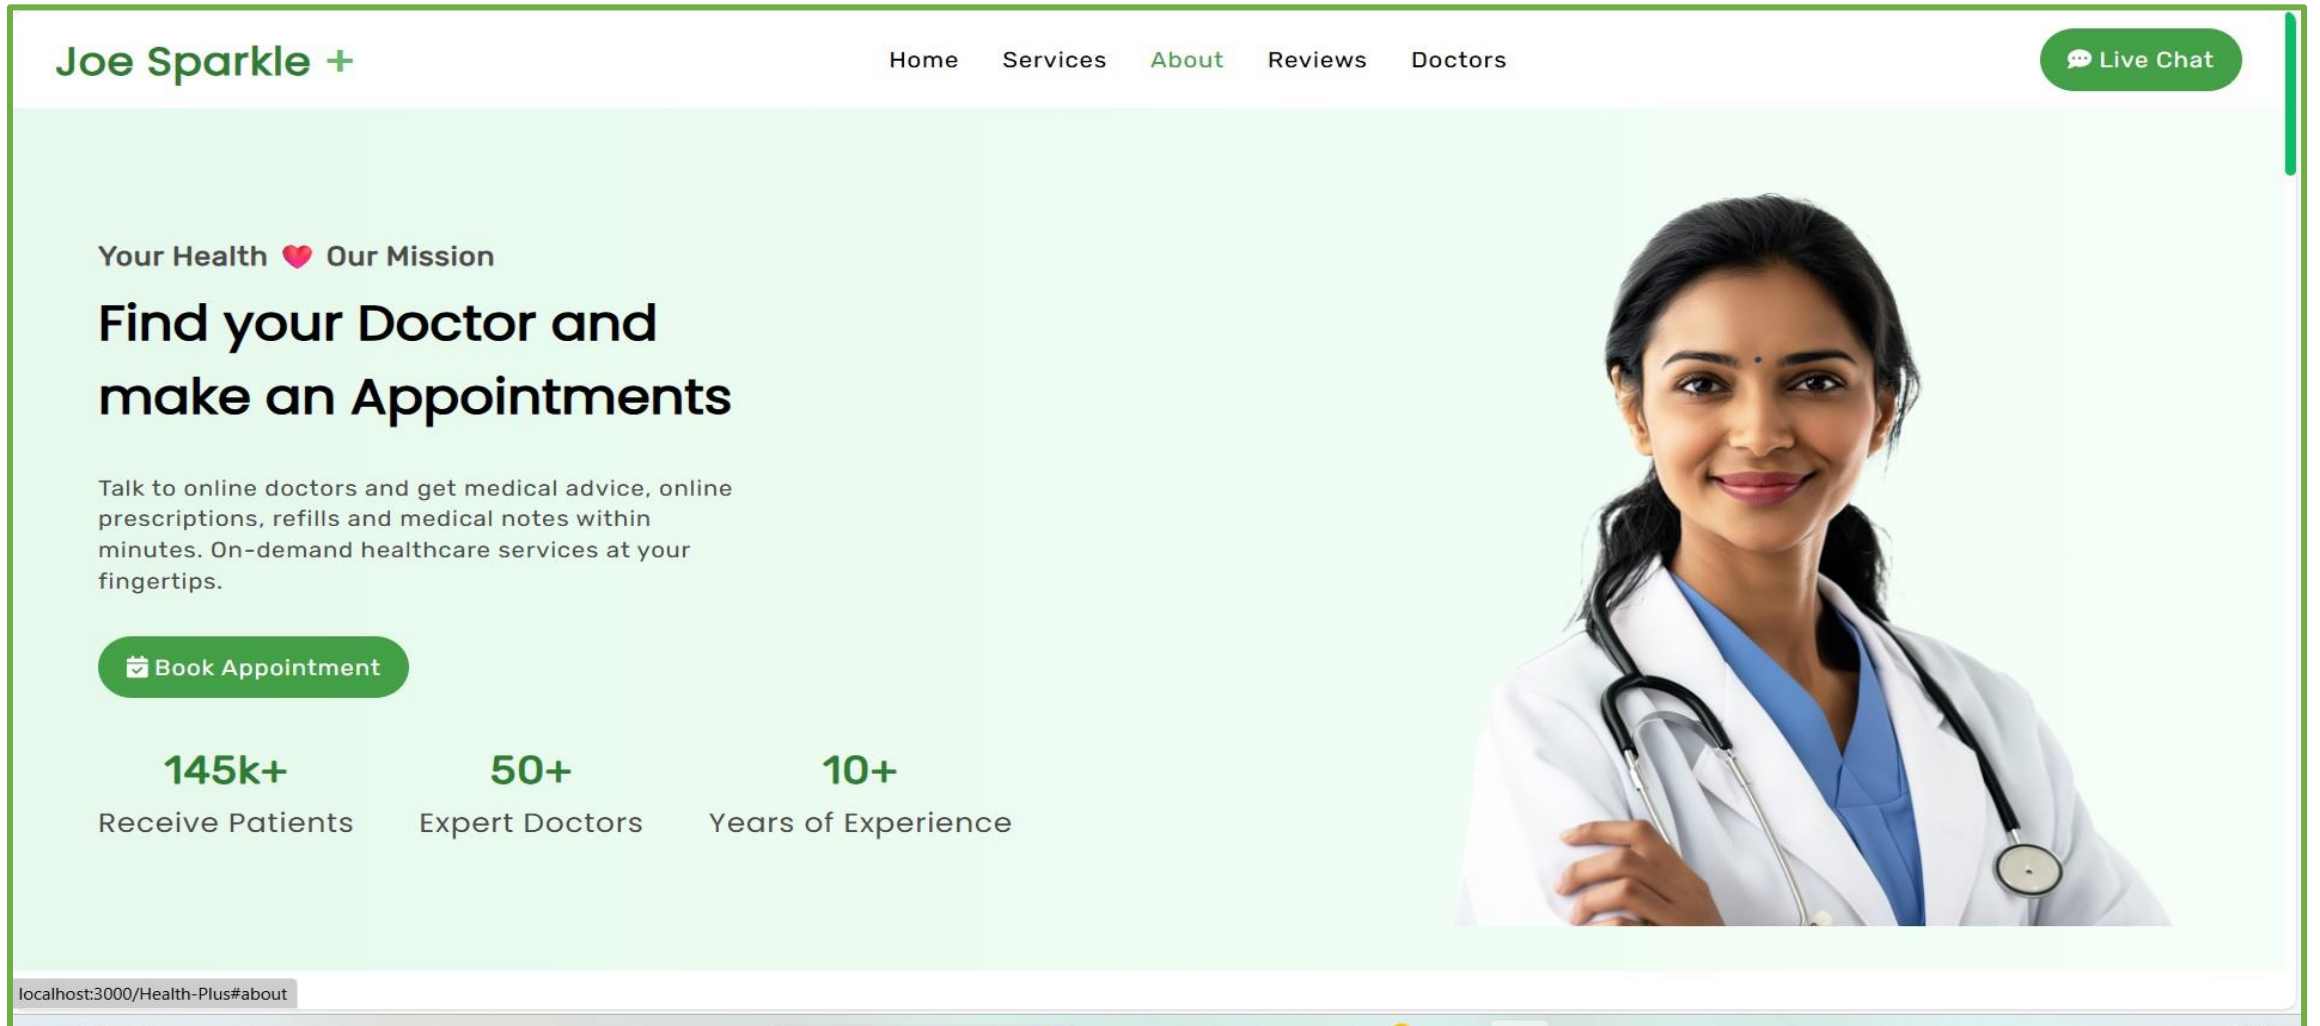

---

The Online Doctor Appointment Booking Web Application is a user-centric platform designed to streamline the healthcare appointment process by connecting patients with doctors through a digital interface. This web-based system allows users to search for doctors by specialty, location, and availability, and to book, reschedule, or cancel appointments with ease. It also provides doctors with a secure portal to manage schedules, view patient details, and maintain appointment history. The system enhances accessibility, reduces administrative workload, and minimizes waiting time through real-time updates and notifications.

# Problem Statement

In many clinics and hospitals, appointment scheduling is still done manually, leading to confusion, overlapping bookings, and wasted time. Patients often have to wait in long queues or make multiple calls to fix an appointment.. This traditional method is inefficient, time-consuming, and highly prone to human error. Patients often experience long waiting times, overlapping schedules, and unnecessary delays, which negatively impact their overall healthcare experience.
